

Mercury Product Range Enhancement Notification

August 22, 2007

Contact for further information: Richard C. Jones, T: 908 850 5088

Implementation Timeframe: Winter 2007

Front mounting screws: TDI has a continuous improvement plan in place for the Mercury product line. This notification outlines planned changes to the front mounting screws. A Global change on the Mercury module range is being made based on Customer input that the slotted fixing hardware could be improved by changing to Phillips style heads. We will be changing the slotted-head type mounting screw to a Phillips-head screw shortly. The new fixing screw will also have a “lead-in” point. We expect that at current stock and run-rates, this could take as long as 4-months before actual production units are delivered with the new hardware.
