Subject: TDI Offers New Power Solutions for WiMAX

Hackettstown, N.J. – July 11, 2006

WiMAX (Worldwide Interoperability for Microwave Access) is a standards-based technology enabling the delivery of last mile wireless broadband access as an alternative to cable and DSL (Digital Subscriber Line). WiMAX will provide fixed, nomadic, portable and, eventually, mobile wireless broadband connectivity without the need for direct line-of-sight with a base station. New technologies are needed to reach these areas that are too remote, too difficult and too expensive to reach with traditional wired infrastructures.

Transistor Devices, Inc. (TDI) addresses this challenge with new WiMAX power solutions based on our Remote Power System Series (RPS). The RPS plays a crucial role in a WiMAX system by providing the best combination of Environmentally Sealed Power Modules and Battery Backup for deployment at the Network's Edge.

Remote Power System, 1000W AC-DC Rectifier with 4 hrs of battery backup

TDI's RPS is the ideal fit for WiMAX as it offers "pay as you grow" scalability. Its modular design enables you to add to the system as your needs warrant. The RPS will also reduce maintenance costs, as the highly reliable Environmentally Sealed Rectifiers and Electronics ensure fewer site visits. Additionally, TDI offers flexible mounting options including pole, wall or tower.

Transistor Devices, Inc. (TDI) is a global supplier of Power Systems Solutions for the Computer/Networking, Telecommunications, Military/Aerospace, Medical and Industrial markets. We have the broadest range of high technology power conversion products available in the marketplace, including DC and AC Power Systems, Power Supplies, Rectifiers, Converters and accessory equipment. Established in 1960, TDI is headquartered in New Jersey, has over 1000 employees and seven facilities located throughout the world. For more information on TDI, visit our website at www.tdipower.com.
